

General Pump Control & Level Indication

Pump Shut Off Controller

FPC-11010

Low Level - Pump 'Shut Off' Controller

This simple, yet effective controller provides the means of controlling an automatic pump, used to pump water from a tank into the home. The system provides for 'Low Voltage' cabling between the float switch, situated in the storage tank, and the controller. When the storage tank is empty, the controller inhibits the pump and the 'Low Level' light is illuminated. Power to the pump is restored once water level in the tank has risen to the reset level.

Features

- 'Power on' indication
- 'Low level' indication
- 10Amp switch rating
- 'Quick Plug' pump and float switch DIY connection
- Low voltage float switch circuitry

Kit Includes

- Controller Enclosure c/w power lead and moulded plug
- Mounting brackets
- 9006 NRB 10m Cable Float Switch
