## 1. Product introduction

TM02 7397 0511

**Fig. 1** CRE, CRIE and CRNE pumps

The CRE, CRIE and CRNE pumps are based on the CR, CRI and CRN pumps.

CRE, CRIE and CRNE pumps belong to the so-called E-pump family and are referred to as E-pumps.

The difference between the CR and CRE pump ranges is the motor. CRE, CRIE and CRNE pumps are fitted with an E-motor, i.e. a motor with built-in frequency converter.

The E-pump motor is a Grundfos MGE motor designed to EN standards.

The built-in frequency converter enables continuously variable control of the motor speed. This means that the pump can be set to operation at any duty point.

The purpose of continuously variable speed control of the motor speed is to adjust the performance to a given requirement.

CRE, CRIE and CRNE pumps are available with an integrated pressure sensor connected to the frequency converter.

The pump materials are identical to those of the CRI and CRN pump ranges.

### Selecting an E-pump

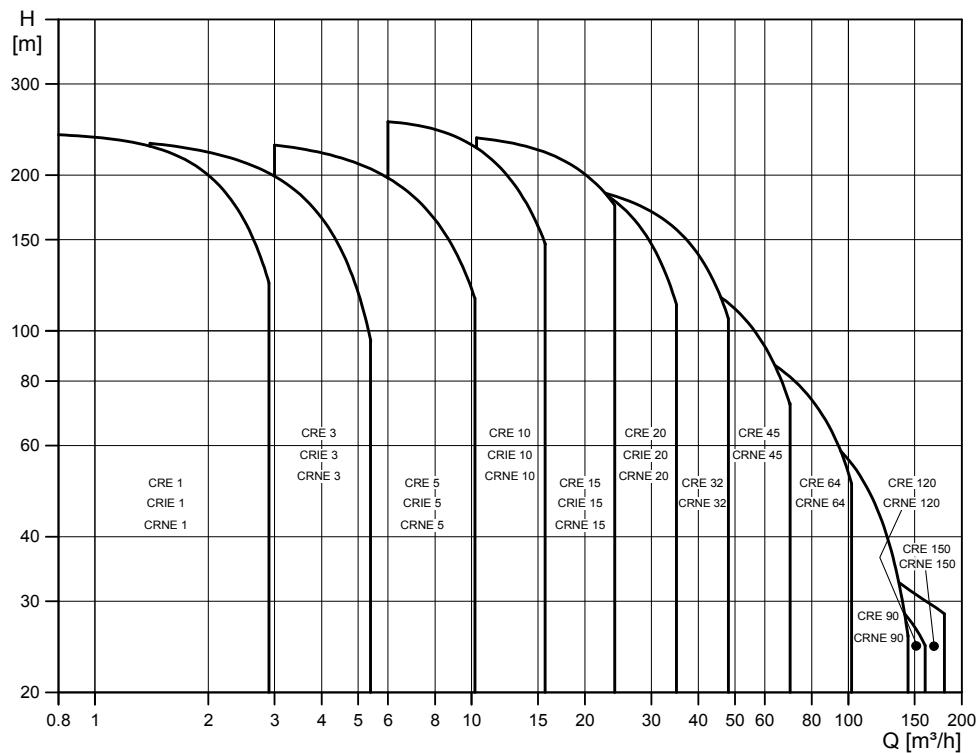

Select an E-pump if the following is required:

- controlled operation, i.e. the consumption fluctuates
- constant pressure
- communication with the pump.

Adaptation of performance through frequency-controlled speed control offers obvious benefits, such as:

- energy savings
- increased comfort
- control and monitoring of the pump performance.

## Performance range

TM02 7357 4408

**Fig. 2** Performance range, CRE, CRIE and CRNE

### EuP ready

The CRE, CRIE, CRNE pumps are energy-optimised and comply with the EuP Directive (Commission Regulation (EC) No 547/2012) which has been effective since 1 January 2013. As from this date, all pumps will be classified/graduated in a new energy minimum efficiency index (MEI).

### Minimum efficiency index

Minimum efficiency index (MEI) means the dimensionless scale unit for hydraulic pump efficiency at best efficiency point (BEP), part load (PL) and overload (OL). The Commission Regulation (EU) sets efficiency requirements to  $MEI \geq 0.10$  as from 1 January 2013 and  $MEI \geq 0.40$  as from 1 January 2015. An indicative benchmark for best-performing water pump available on the market as from 1 January 2013 is determined in the Commission Regulation.

- The benchmark for most efficient water pumps is  $MEI \geq 0.70$ .
- The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter.

- The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable-speed drive that matches the pump duty to the system.
- Information on benchmark efficiency is available at <http://europump.eu/efficiencycharts>.

### Minimum efficiency index (MEI)

Pump type	MEI
CR 1-3	> 0.70
CR 3-3	> 0.70
CR 5-3	0.57
CR 10-3	> 0.70
CR 15-3	> 0.70
CR 20-3	> 0.70
CR 32-3	> 0.70
CR 45-3	> 0.70
CR 64-3	> 0.70
CR 90-3	> 0.70

## Applications

### Application

#### Water supply

- Filtration and transfer at waterworks
- Distribution from waterworks
- Pressure boosting in mains
- Pressure boosting in high-rise buildings, hotels, etc.
- Pressure boosting for industrial water supply

#### Industry

##### Pressure boosting

- Process water systems
- Washing and cleaning systems
- Vehicle-washing tunnels
- Firefighting systems

##### Liquid transfer

- Cooling and air-conditioning systems (refrigerants)
- Boiler feed and condensate systems
- Machine tools (cooling lubricants)
- Aquafarming

##### Special transfer duties

- Oils and alcohols
- Acids and alkalis
- Glycol and coolants

#### Water treatment

- Ultrafiltration systems
- Reverse osmosis systems
- Softening, ionising, demineralising systems
- Distillation systems
- Separators
- Swimming baths

#### Irrigation

- Field irrigation (flooding)
- Sprinkler irrigation
- Drip-feed irrigation

For further information about which pump version to choose for a specific application or liquid, see section 9. *Pumped liquids*, page 77.

○ Available.

\* CRNE 32 to 150 with HQQE shaft seal: -40 to +120 °C.

## Pump

The CR and CRE pumps are non-self-priming, vertical multistage centrifugal pumps.

The pumps are available with a Grundfos standard motor (CR pumps) or a Grundfos frequency-controlled motor (CRE pumps).

The pump consists of a pump head and a base. The chamber stack and the sleeve are secured between the pump head and the base by means of staybolts. The base has suction and discharge ports on the same level (in line). All pumps are fitted with a maintenance-free mechanical shaft seal of the cartridge type.

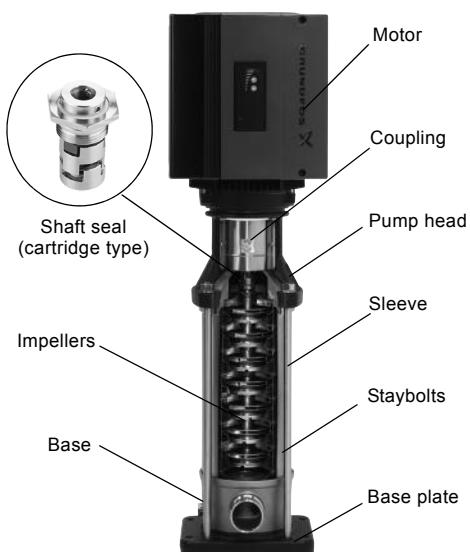

Fig. 3 CR pump

GR1003261 - GR3395

## Motor

### MGE motors

MGE motors incorporate thermal protection against slow overload and blocking (IEC 34-11: TP 211).

CRE, CRIE and CRNE pumps require no external motor protection.

### Grundfos blueflux®

Grundfos blueflux® technology represents the best from Grundfos within energy-efficient motors and frequency converters. Grundfos blueflux® solutions either meet or exceed legislative requirements, such as the EuP IE3 and IE4 grades.

TM04 99010814

Fig. 4 Grundfos blueflux® label

To read more about the energy challenge and Grundfos blueflux®, please visit [grundfos.com/energy](http://grundfos.com/energy)

### Frequency-controlled MGE motors

CRE, CRIE and CRNE pumps are fitted with a totally enclosed, fan-cooled, frequency-controlled MGE motor with principal dimensions to EN standards.

Electrical tolerances comply with EN 60034.

CRE, CRIE, CRNE pumps from 0.37 to 1.1 kW are fitted with single-phase MGE motors as standard.

The 1.5 kW single-phase MGE motors are available on request.

CRE, CRIE, CRNE pumps from 1.5 to 22 kW are fitted with three-phase MGE motors as standard. The 0.37 to 1.1 kW three-phase MGE motors are available on request.

See WinCAPS or WebCAPS on [www.grundfos.com](http://www.grundfos.com).

### Electrical data

MGE motor CRE, CRIE, CRNE	
Mounting designation	Up to 4 kW: V18 5.5 kW and up: V1
Insulation class	F
Efficiency class	0.75 to 2.2 kW: above IE4 level 3 to 22 kW: IE3 0.37 and 0.55 kW motors are not covered by the IE classification.
Enclosure class	0.37 to 2.2 kW: IP55 (IP66 optional) 3-22 kW: IP55
	P2: 0.37 - 1.5 kW: 1 x 200-240 V
Supply voltage Tolerance: - 10 %/+ 10 %	P2: 0.37 - 2.2 kW: 3 x 380-500 V P2: 3-22 kW: 3 x 380-480 V
Supply frequency	50/60 Hz

### Optional motors

The Grundfos standard range of motors meets a wide variety of system requirements.

For special applications or operating conditions, we offer custom-built motors, such as:

- ATEX-approved motors
- MG motors with anti-condensation heating unit
- motors with thermal protection.

## MGE 0.37 to 2.2 kW

### Advanced functional module (FM 300)

The FM 300 is the standard functional module in all MGE motors from 0.37 to 2.2 kW.

The module has a number of inputs and outputs enabling the motor to be used in advanced applications where many inputs and outputs are required.

The FM 300 has these connections:

- three analog inputs
- one analog output
- two dedicated digital inputs
- two configurable digital inputs or open-collector outputs
- Grundfos Digital Sensor input and output
- two Pt100/1000 inputs
- two LiqTec sensor inputs
- two signal relay outputs
- GENibus connection.

### Connection terminals

CRE, CRIE, CRNE pumps have a number of inputs and outputs enabling the pumps to be used in advanced applications where many inputs and outputs are required.

The number of available inputs and outputs depends on the selected functional module. Functional module 300 has been selected as standard for CRE, CRIE and CRNE pumps.

See fig. 5.

As a precaution, the wires to be connected to the following connection groups must be separated from each other by reinforced insulation in their entire lengths.

#### Inputs and outputs

All inputs and outputs are internally separated from the mains-conducting parts by reinforced insulation and galvanically separated from other circuits.

All control terminals are supplied by safety extra-low voltage (SELV), thus ensuring protection against electric shock.

#### Signal relay outputs

##### – Signal relay 1:

LIVE:

Mains supply voltages up to 250 VAC can be connected to this output.

SELV:

The output is galvanically separated from other circuits. Therefore, the supply voltage or safety extra-low voltage can be connected to the output as desired.

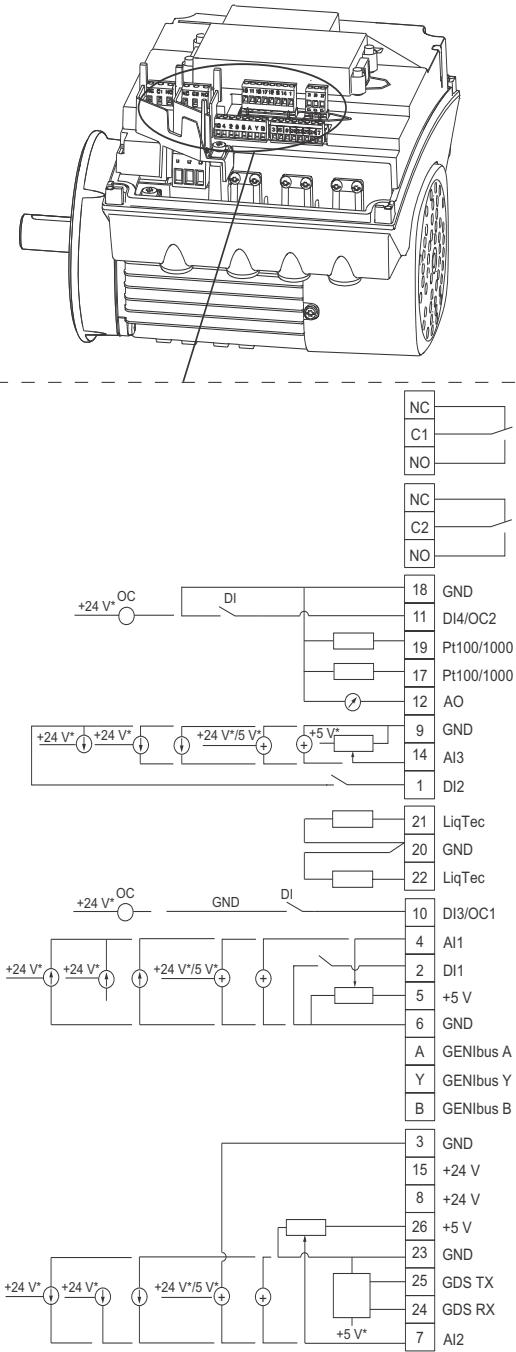

##### – Signal relay 2:

SELV:

The output is galvanically separated from other circuits. Therefore, the supply voltage or safety extra-low voltage can be connected to the output as desired.

#### • Mains supply (terminals N, PE, L or L1, L2, L3, PE)

A galvanically safe separation must fulfil the requirements for reinforced insulation including creepage distances and clearances specified in EN 61800-5-1.

\* If an external supply source is used, there must be a connection to GND.

Fig. 5 Connection terminals, FM 300 functional module

TM05 3509 3512

## MGE 3 to 7.5 kW

### Advanced I/O module

The Advanced I/O module is the standard functional module in all MGE motors from 3 to 7.5 kW.

The module has a number of inputs and outputs enabling the motor to be used in advanced applications where many inputs and outputs are required.

The Advanced I/O module has these connections:

- start/stop terminals
- three digital inputs
- one setpoint input
- one sensor input
- one analog output
- GENibus connection.

### Connection terminals

As a precaution, the wires to be connected to the following connection groups must be separated from each other by reinforced insulation in their entire lengths.

#### Inputs

- Start/stop (terminals 2 and 3)
- digital inputs (terminals 1 and 9, 10 and 9, 11 and 9)
- setpoint input (terminals 4, 5 and 6)
- sensor input (terminals 7 and 8)
- GENibus (terminals B, Y and A).

All inputs are internally separated from the mains-conducting parts by reinforced insulation and galvanically separated from other circuits.

All control terminals are supplied with protective extra-low voltage (PELV), thus ensuring protection against electric shock.

### Output (relay signal, terminals NC, C, NO)

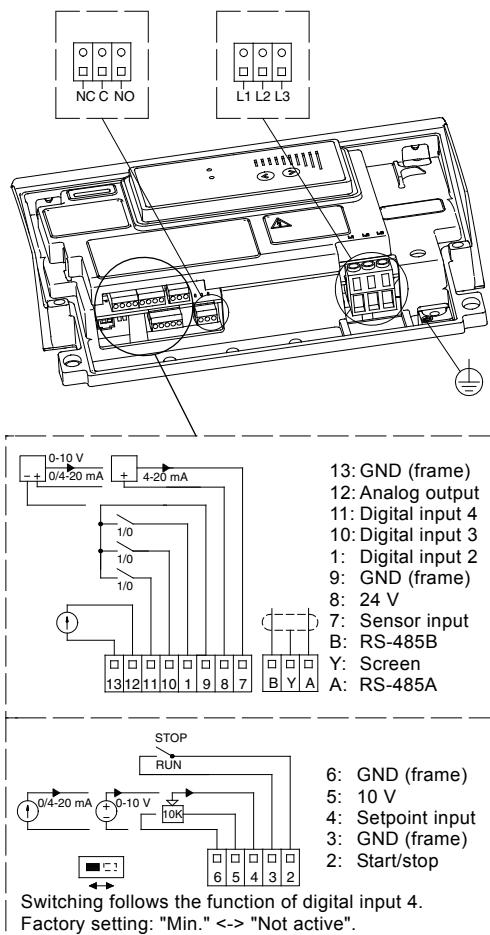

The output is galvanically separated from other circuits.

Therefore, the supply voltage or protective extra-low voltage can be connected to the output as desired.

- analog output (terminal 12 and 13).

### Mains supply (terminals L1, L2, L3)

A galvanic separation must fulfil the requirements for reinforced insulation including creepage distances and clearances specified in EN 60335.

TMO290320904

**Fig. 6** Connection terminals, Advanced I/O module

## MGE 11 to 22 kW

### Advanced I/O module

The advanced I/O module is the standard functional module in all MGE motors from 11 to 22 kW.

The module has a number of inputs and outputs enabling the motor to be used in advanced applications where many inputs and outputs are required.

The Advanced I/O module has these connections:

- start/stop terminals
- three digital inputs
- one setpoint input
- one sensor input (feedback sensor)
- one sensor 2 input
- one analog output
- two Pt100 inputs
- two signal relay outputs
- GENibus connection.

### Connection terminals

As a precaution, the wires to be connected to the following connection groups must be separated from each other by reinforced insulation in their entire lengths.

#### Inputs

- Start/stop (terminals 2 and 3)
- digital inputs (terminals 1 and 9, 10 and 9, 11 and 9)
- sensor input 2 (terminals 14 and 15)
- Pt100 sensor inputs (terminals 17, 18, 19 and 20)
- setpoint input (terminals 4, 5 and 6)
- sensor input (terminals 7 and 8)
- GENibus (terminals B, Y and A).

All inputs are internally separated from the mains-conducting parts by reinforced insulation and galvanically separated from other circuits.

All control terminals are supplied with protective extra-low voltage (PELV), thus ensuring protection against electric shock.

#### Output (relay signal, terminals NC, C, NO)

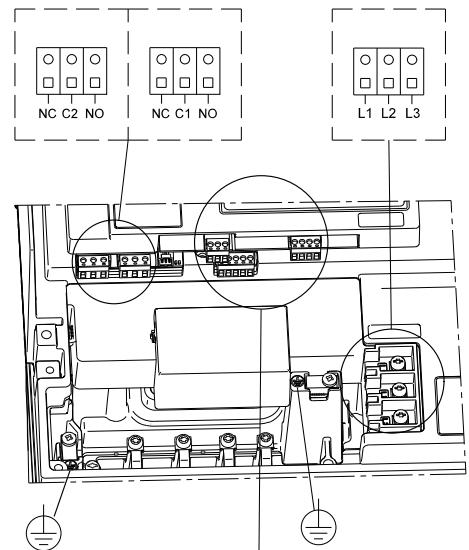

The output is galvanically separated from other circuits.

Therefore, the supply voltage or protective extra-low voltage can be connected to the output as desired.

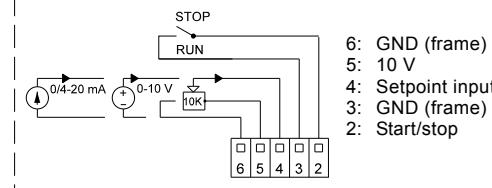

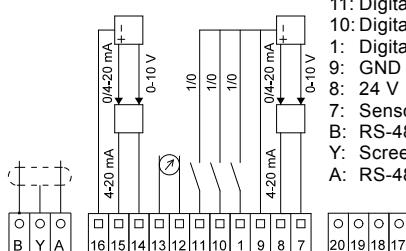

- analog output (terminal 12 and 13).

#### Mains supply (terminals L1, L2, L3)

A galvanic separation must fulfil the requirements for reinforced insulation including creepage distances and clearances specified in EN 61800-5-1.

**Fig. 7** Connection terminals, Advanced I/O module

## Terminal box positions

As standard, the terminal box is fitted on the suction side of the pump.

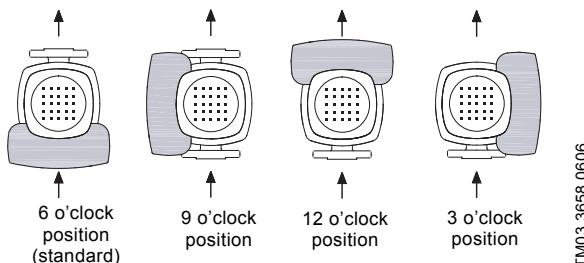

Fig. 8 Terminal box positions

## Ambient temperature

Motor power [kW]	Motor make	Phase	Motor efficiency class	Maximum ambient temperature [°C]	Maximum altitude above sea level [m]
0.37 - 1.5	MGE	1	-*	50	
0.37 - 2.2	MGE	3	-*	50	1,000
3-22	MGE	3	IE3	40	

\* Even though the MGE motor (0.37 to 2.2 kW) has no defined efficiency class, the efficiency is still above the IE4 level including both motor and electronics.

If the ambient temperature exceeds the above maximum ambient temperatures or the pump is installed at an altitude exceeding 1,000 metres, the motor must not be fully loaded due to the risk of overheating. Overheating may result from excessive ambient temperatures or the low density and consequently low cooling effect of the air.

In such cases, it may be necessary to use a motor with a higher rated output.

## Viscosity

The pumping of liquids with densities or kinematic viscosities higher than those of water will cause a considerable pressure drop, a drop in the hydraulic performance and a rise in the power consumption.

In such situations, the pump should be fitted with a larger motor. If in doubt, contact Grundfos.

## Installation altitude

Installation altitude is the height above sea level of the installation site. Motors installed up to 1,000 metres above sea level can be loaded 100 %.

Motors installed more than 1,000 metres above sea level must not be fully loaded due to the low density and consequently low cooling effect of the air.

### MGE 0.37 to 2.2 kW

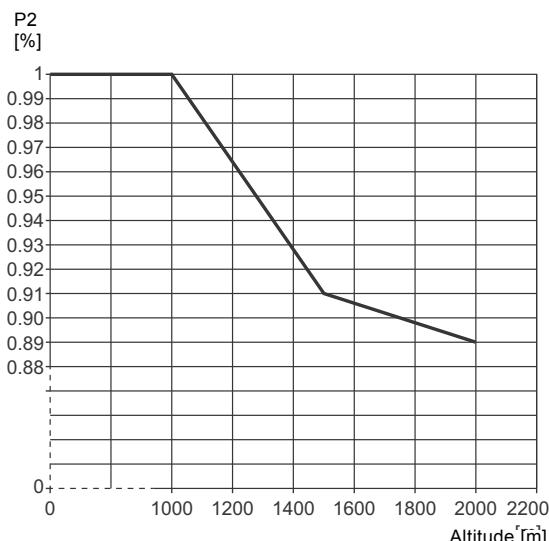

Fig. 9 Derating of motor output (P2) in relation to altitude above sea level

### MGE 3 to 22 kW

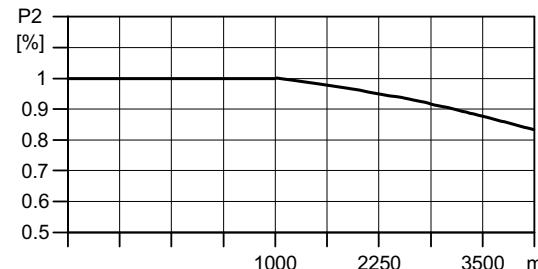

Fig. 10 Derating of motor output (P2) in relation to altitude above sea level

## 2. Control of E-pumps

### Examples of E-pump applications

CRE, CRIE and CRNE pumps are the ideal choice for a number of applications characterised by a demand for variable flow at constant pressure. The pumps are suited for water supply systems and pressure boosting as well as for industrial applications.

Depending on the application, the pumps offer energy savings, increased comfort and improved processing.

#### E-pumps in the service of industry

The industry uses a large number of pumps in many different applications. Demands on pumps in terms of pump performance and mode of operation make speed control a must in many applications.

Some of the applications in which E-pumps are often used are listed below.

#### Constant pressure

- Water supply
- washing and cleaning systems
- distribution from waterworks
- humidifying systems
- water treatment systems
- process boosting systems, etc.

**Example:** Within industrial water supply, E-pumps with integrated pressure sensor are used to ensure a constant pressure in the piping system. From the sensor, the E-pump receives inputs about changes of pressure as a result of changes in the consumption. The E-pump responds to the input by adjusting the speed until the pressure is equalised. The constant pressure is stabilised once more on the basis of a preset setpoint.

#### Constant temperature

- Air-conditioning systems at industrial plants
- industrial cooling systems
- industrial freezing systems
- casting and moulding tools, etc.

**Example:** In industrial freezing systems, E-pumps with temperature sensor increase comfort and lower operating costs compared with pumps without a temperature sensor.

An E-pump continuously adapts its performance to the changing demands reflected in the differences in temperature of the liquid circulating in the freezing system. Thus, the lower the demand for cooling, the smaller the quantity of liquid circulated in the system and vice versa.

#### Constant level

- Boiler feed systems
- condensate systems
- sprinkler irrigation systems
- chemical industry, etc.

**Example:** In a steam boiler, it is important to be able to monitor and control pump operation to maintain a constant level of water in the boiler.

By using an E-pump with level sensor in the boiler, it is possible to maintain a constant water level.

A constant water level ensures optimum and cost-efficient operation as a result of a stable steam production.

#### Dosing applications

- Chemical industry, i.e. control of pH values
- petrochemical industry
- paint industry
- degreasing systems
- bleaching systems, etc.

**Example:** In the petrochemical industry, E-pumps with pressure sensor are used as dosing pumps.

The E-pumps help to ensure that the correct mixture ratio is achieved when more liquids are combined.

E-pumps functioning as dosing pumps improve processing and offer energy savings.

#### E-pumps in commercial building services

Commercial building services use E-pumps to maintain a constant pressure or a constant temperature based on a variable flow.

#### Constant pressure

Water supply in high-rise buildings, such as office buildings and hotels.

**Example:** E-pumps with pressure sensor are used for water supply in high-rise buildings to ensure a constant pressure even at the highest draw-off point. As the consumption pattern and thus the pressure changes during the day, the E-pump continuously adapts its performance until the pressure is equalised.

#### Constant temperature

- Air-conditioning systems in hotels, schools, etc.
- building cooling systems, etc.

**Example:** E-pumps are an excellent choice for buildings where a constant temperature is essential. E-pumps keep the temperature constant in air-conditioned, high-rise glass buildings, irrespective of the seasonal fluctuations of the outdoor temperature and various heat impacts inside the building.

## Control options

It is possible to communicate with CRE, CRIE, CRNE pumps via the following:

- control panel on the pump
- Grundfos R100 remote control
- Grundfos GO Remote
- central management system.

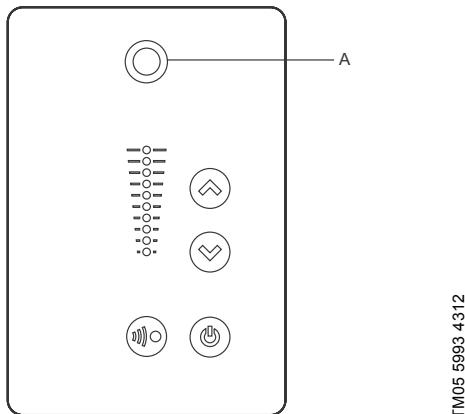

The purpose of controlling an E-pump is to monitor and control the pressure, temperature, flow and liquid level of the system.

### Control panel on pump

The control panel on the E-pump terminal box makes it possible to change the setpoint settings manually.

#### MGE 0.37 to 2.2 kW

The operating condition of the pump is indicated by the Grundfos Eye on the control panel. See fig. 11, pos. A.

TM05 5993 4312

**Fig. 11** Control panel on CRE pump, 0.37 to 2.2 kW

#### MGE 3 to 22 kW

TM02 8513 0304

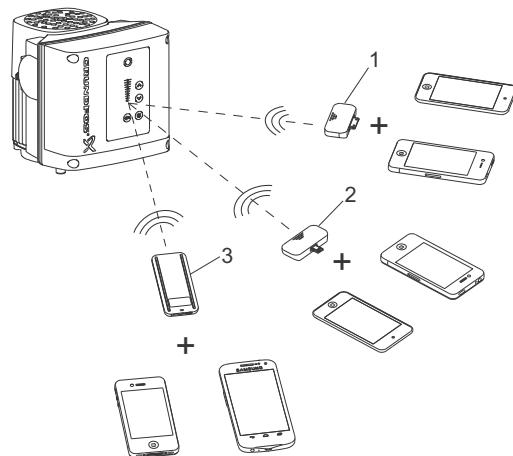

**Fig. 12** Control panel on CRE pump, 3 to 22 kW

## Grundfos GO Remote

The pump is designed for wireless radio or infrared communication with the Grundfos GO Remote.

The Grundfos GO Remote enables setting of functions and gives access to status overviews, technical product information and actual operating parameters.

The Grundfos GO Remote offers the following mobile interfaces (MI). See fig. 13.

TM06 0744 0914

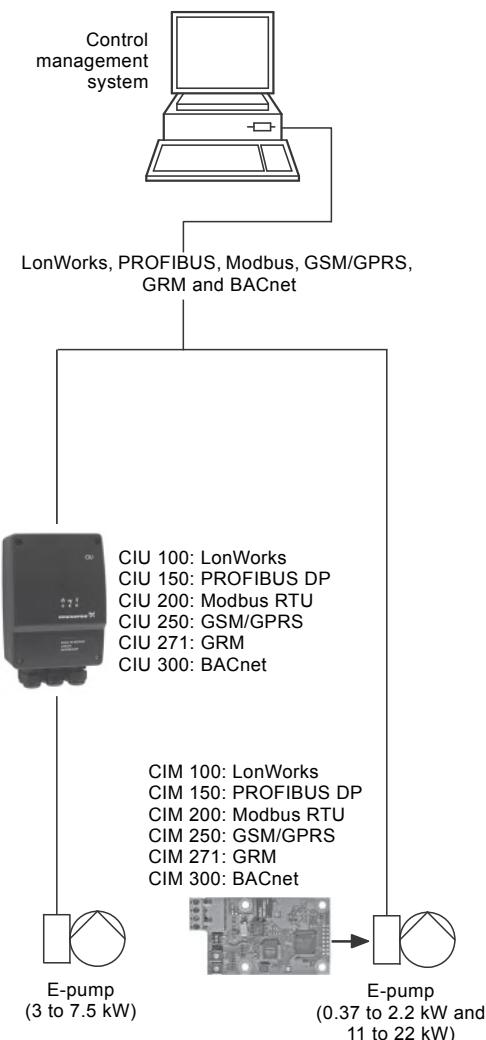

**Fig. 13** Grundfos GO Remote communicating with the pump via radio or infrared connection (IR)

Pos.	Description
1	Grundfos MI 202: Add-on module which can be used in conjunction with an Apple iPhone or iPod with 30-pin connector and iOS 5.0 or later, e.g. fourth generation iPhone or iPod.
2	Grundfos MI 204: Add-on module which can be used in conjunction with an Apple iPhone or iPod with Lightning connector, e.g. fifth generation iPhone or iPod. (The MI 204 is also available together with an Apple iPod touch and a cover.)
3	Grundfos MI 301: Separate module enabling radio or infrared communication. The module can be used in conjunction with an Android or iOS-based smart device with Bluetooth connection.

## Central management system

Communication with the E-pump is possible even if the operator is not present near the E-pump.

Communication is enabled by connecting the E-pump to a central management system. This allows the operator to monitor the pump and to change control modes and setpoint settings.

**Fig. 14** Structure of a central management system

## Control modes for E-pumps

CRE, CRIE and CRNE pumps are available in two variants:

- CRE, CRIE and CRNE with integrated pressure sensor
- CRE, CRIE and CRNE without sensor.

### CRE, CRIE and CRNE with integrated pressure sensor

Use CRE, CRIE and CRNE pumps with integrated pressure sensor in applications where you want to control the pressure after the pump, irrespective of the flow. For further information, see *Examples of E-pump applications*, page 13.

Signals of pressure changes in the piping system are transmitted continuously from the sensor to the pump. The pump responds to the signals by adjusting its performance up or down to compensate for the pressure difference between the actual and the desired pressure. As this adjustment is a continuous process, a constant pressure is maintained in the piping system.

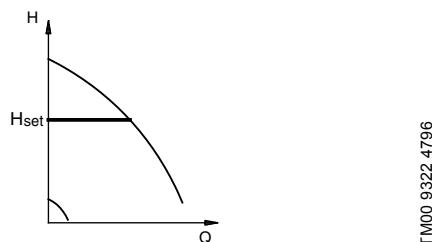

TM02 7398 3403

**Fig. 15** CRE, CRIE and CRNE pumps

A CRE, CRIE or CRNE pump with integrated pressure sensor facilitates installation and commissioning. CRE, CRIE and CRNE pumps with integrated pressure sensor can be set to either of these control modes:

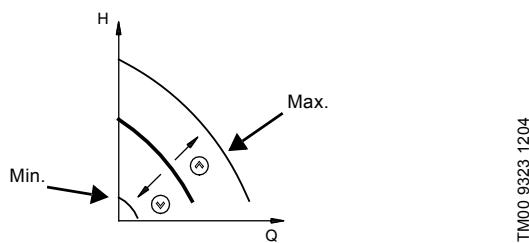

- constant pressure (factory setting)
- constant curve.

In constant-pressure mode, the pump maintains a preset pressure after the pump, irrespective of the flow. See fig. 16.

**Fig. 16** Constant-pressure mode

In constant-curve mode, the pump is not controlled. It can be set to pump according to a preset pump characteristic within the range from min. curve to max. curve. See fig. 17.

**Fig. 17** Constant-curve mode

## CRE, CRIE and CRNE without sensor

CRE, CRIE and CRNE pumps without sensor are suitable in these situations:

- Uncontrolled operation is required.
- You want to retrofit another sensor in order to control the flow, temperature, differential temperature, liquid level, pH value, etc. at some arbitrary point in the system.

### MGE 0.37 to 2.2 kW

These CRE, CRIE and CRNE pumps without sensor can be set to either of these control modes:

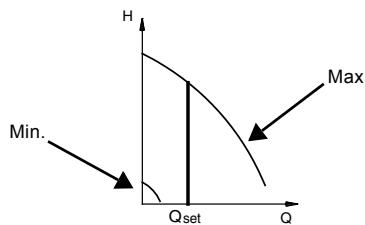

- constant pressure
- constant differential pressure
- constant temperature
- constant differential temperature
- constant flow rate
- constant level
- constant curve
- constant other value.

### MGE 3 to 22 kW

These CRE, CRIE and CRNE pumps without sensor can be set to either of these control modes:

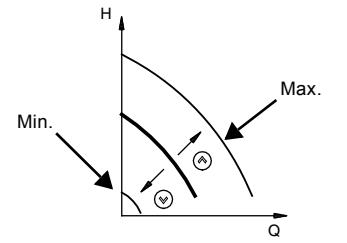

- controlled operation
- uncontrolled operation (factory setting).

In controlled-operation mode, the pump adjusts its performance to the desired setpoint. See fig. 18.

**Fig. 18** Constant-flow mode

In uncontrolled-operation mode, the pump operates according to the constant curve set. See fig. 19.

**Fig. 19** Constant-curve mode

CRE, CRIE and CRNE pumps can be fitted with sensor types meeting the requirements mentioned in the "Grundfos E-pumps" data booklet available on [www.grundfos.com](http://www.grundfos.com) (WebCAPS).

CRE, CRNE 45-1-1 → 45-4	-	-	16	
CRE, CRNE 45-5-2 → 45-7	-	-	30	-30 - +120
CRE, CRNE 64-1-1 → 64-3	-	-	16	
CRE, CRNE 90-1-1 → 90-3	-	-	16	
CRE, CRNE 120	-	-	30	
CRE, CRNE 150	-	-	30	

NOTE: For pump sizes 32, 45, 64, 90, 120, 150, the max. pressure for PJE version is 50 bar and only available in CRNE version.

### Operating range of the shaft seal

The operating range of the shaft seal depends on operating pressure, pump type, type of shaft seal and liquid temperature. The range shown in fig. 20 applies to clean water and water with anti-freeze liquids. For selection of the right shaft seal, see section 9. *Pumped liquids*, page 77. If the operating range is exceeded, the life of the shaft seal may be reduced.

TM03 8853 4907

Standard shaft seal	Motor size [kW]	Description	Liquid temperature [°C]
HQQE	0.37 - 45	O-ring (cartridge) (balanced seal), SiC/SiC, EPDM	-40 - +120
HBQE <sup>1)</sup>	55-75	O-ring (cartridge) (balanced seal), carbon/SiC, EPDM	0-120
HQQV	0.37 - 45	O-ring (cartridge) (balanced seal), SiC/SiC, FKM	-20 - +90
HBQV <sup>1)</sup>	55-75	O-ring (cartridge) (balanced seal), carbon/SiC, FKM	0-90

<sup>1)</sup> Available as HQQE and HQQV on request.

See section 11. *Variants*, page 94, in case of extreme temperatures:

- low temperatures down to -40 °C
- high temperatures up to 180 °C.

Fig. 20 Operating range of standard shaft seals

## Maximum inlet pressure

The following table shows the maximum permissible inlet pressure. However, the actual inlet pressure plus the pressure against a closed valve must always be lower than the maximum permissible operating pressure.

If the maximum permissible operating pressure is exceeded, the conical bearing in the motor may be damaged and the life of the shaft seal reduced.

Pump type	[bar]
<b>CRE, CRIE, CRNE 1</b>	
1-2 → 1-25	10
1-27	15

120-1	10
<b>CRE, CRNE 150</b>	
150-1-1	10
150-1	15

## Examples of operating and inlet pressures

The values for operating and inlet pressures stated in the table should not be considered individually but should always be compared.

See the following examples.

### Example 1

The following pump type has been selected:  
CRE 3-11 A-A-A.

Maximum operating pressure: 16 bar. Maximum inlet pressure: 10 bar.

Discharge pressure against a closed valve: 9.6 bar.  
See page 32.

This pump is not allowed to start at an inlet pressure of 10 bar, but at an inlet pressure of  $16.0 - 10.3 = 5.7$  bar.

### Example 2

The following pump type has been selected:  
CRE 10-2 A-A-A.

Maximum operating pressure: 16 bar.

Maximum inlet pressure: 8 bar.

Discharge pressure against a closed valve: 2.9 bar.  
See page 39.

This pump is allowed to start at an inlet pressure of 8 bar, as the discharge pressure against a closed valve is only 2.9 bar, which results in an operating pressure of  $8.0 + 2.9 = 10.9$  bar. On the contrary, the maximum operating pressure of this pump is limited to 16 bar, as a higher operating pressure will require an inlet pressure of more than 8 bar.

If the inlet or operating pressure exceeds the permissible pressure, see section 11. *Variants*, page 94.

## 6. Selection and sizing

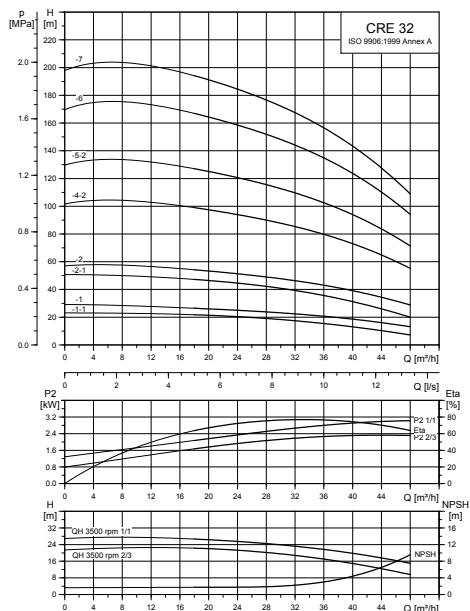

### Selection of pumps

Selection of pumps should be based on these parameters:

- the duty point of the pump (see below)
- dimensional data such as pressure loss as a result of height differences, friction loss in the pipework, pump efficiency (see below)
- pump materials (see page 25)
- pump connections (see page 25)
- shaft seal (see page 25).

### Duty point of the pump

From a duty point, it is possible to select a pump on the basis of the curve charts in section 7. *Performance curves and technical data*, page 28.

TM02 7323 3103

Fig. 21 Example of a curve chart

### Dimensional data

When sizing a pump, take these parameters into account:

- Required flow and pressure at the draw-off point.
- Pressure loss as a result of height differences ( $H_{geo}$ ).
- Friction loss in the pipework ( $H_f$ ).  
It may be necessary to account for pressure loss in connection with long pipes, bends, valves, etc.
- Best efficiency at the estimated duty point.
- NPSH value.  
For calculation of the NPSH value, see *Minimum inlet pressure, NPSH*, page 26.

### Pump efficiency

Before determining the best efficiency point, identify the operation pattern of the pump. If the pump is expected to operate at the same duty point, select a CR pump which is operating at a duty point corresponding to the best efficiency of the pump.

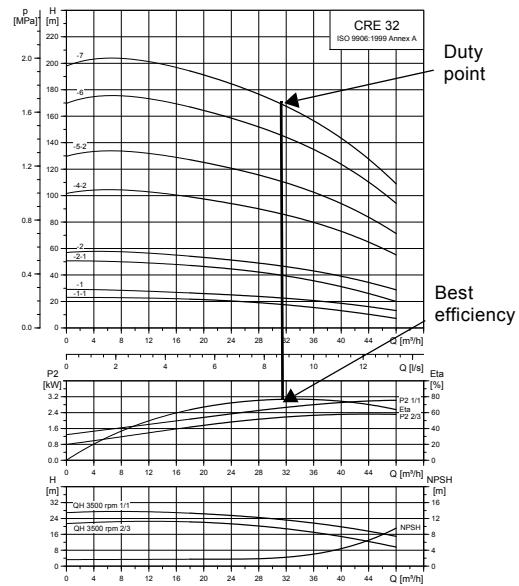

Fig. 22 Example of a CRE pump's duty point

As the pump is sized on the basis of the highest possible flow, it is important always to have the duty point to the right on the efficiency curve ( $\eta$ ) in order to keep the efficiency high when the flow drops.

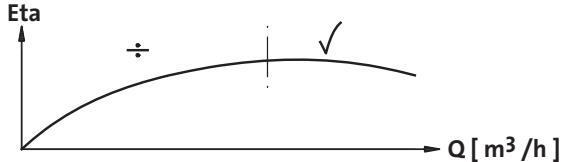

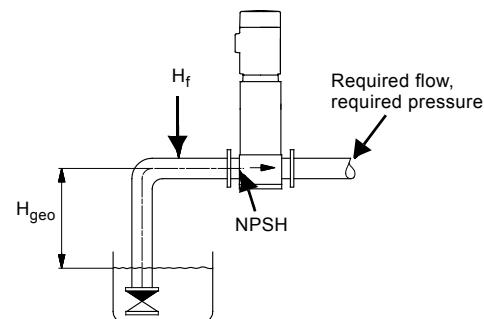

Fig. 23 Best efficiency

TM02 6711 1403

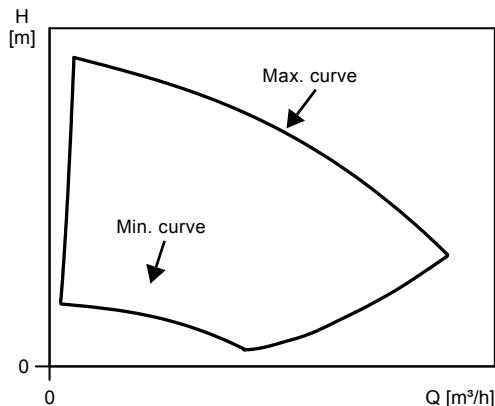

Fig. 24 Dimensional data

Normally, E-pumps are used in applications characterised by a variable flow. Consequently, it is not possible to select a pump that is constantly operating at optimum efficiency.

In order to achieve optimum operating economy, the pump should be selected on the basis of the following criteria:

- The maximum duty point required should be as close as possible to the QH curve of the pump.
- The flow rate at the duty point required should be close to the optimum efficiency ( $\eta_a$ ) for most operating hours.

Between the min. and max. performance curves, E-pumps have an infinite number of performance curves, each representing a specific speed. Therefore, it may not be possible to select a duty point close to the 100 % curve.

**Fig. 25** Min. and max. performance curves

In situations where it is not possible to select a duty point close to the 100 % curve, the below affinity equations can be used. The head (H), flow (Q) and input power (P) are all the appropriate variables for the motor speed (n).

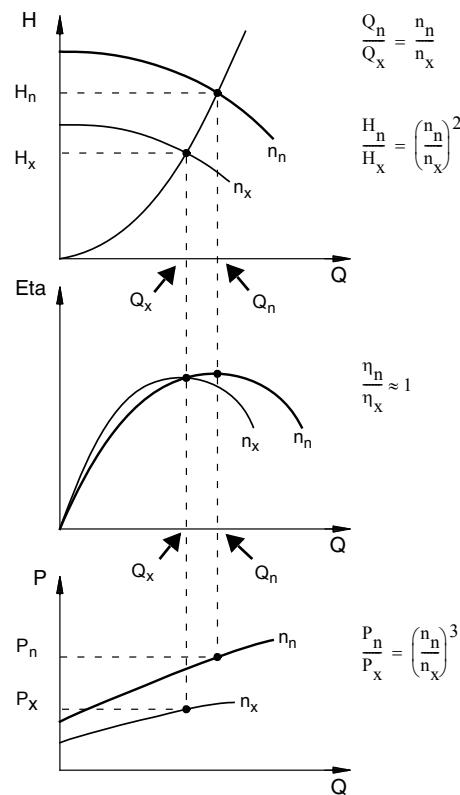

#### Note:

The approximated formulas apply on condition that the system characteristic remains unchanged for  $n_n$  and  $n_x$  and that it is based on the formula  $H = k \times Q^2$  where k is a constant.

The power equation implies that the pump efficiency is unchanged at the two speeds. In practice, this is not quite correct.

To obtain a precise calculation of the power savings resulting from a reduction of pump speed, take into account the efficiencies of the frequency converter and the motor.

TM01 4916 4803

**Fig. 26** Affinity equations

#### Legend

$H_n$	Rated head [m]
$H_x$	Actual head [m]
$Q_n$	Rated flow rate [ $m^3/h$ ]
$Q_x$	Actual flow rate [ $m^3/h$ ]
$n_n$	Rated motor speed [ $min^{-1}$ ] ( $n_n = 3500 min^{-1}$ )
$n_x$	Actual motor speed [ $min^{-1}$ ]
$\eta_n$	Rated efficiency [%]
$\eta_x$	Actual efficiency [%]

#### WinCAPS and WebCAPS

WinCAPS and WebCAPS are both selection programmes offered by Grundfos.

The two programmes offer the possibility of calculating an E-pump's specific duty point and energy consumption.

By entering the dimensional data of the pump, WinCAPS and WebCAPS can calculate the exact duty point and energy consumption.

See section 12. *Further product information* for further information.

TM00 8720 3496

### Pump material

Select the material variant on the basis of the liquid to be pumped.

The product range covers the following three basic types:

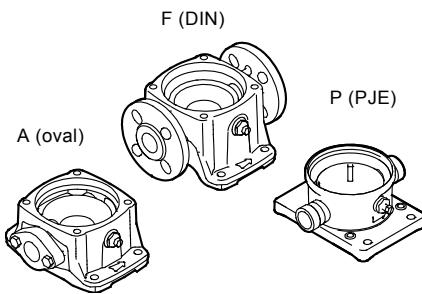

- CRE, CRIE  
Use CRE, CRIE pumps for clean, non-aggressive liquids such as potable water and oils.
- CRNE  
Use CRNE pumps for industrial liquids and acids. See section 9. *Pumped liquids*, page 77, or contact Grundfos.

For saline or chloride-containing liquids such as sea water, CRTE pumps of titanium are available.

### Pump connections

The selection of pump connection depends on the rated pressure and pipework. To meet any requirement, the CRE, CRIE and CRNE pumps offer a wide range of flexible connections, such as

- oval flange (BSP)
- DIN flange
- PJE coupling
- clamp coupling
- union (+GF+)
- other connections on request.

TM02 1201 0601

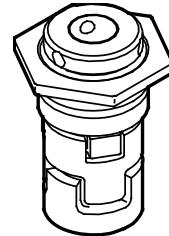

**Fig. 27** Pump connections

### Shaft seal

As standard, the CRE range is fitted with a Grundfos shaft seal (cartridge type) suitable for the most common applications.

These key parameters must be taken into account when selecting the shaft seal:

- type of pumped liquid
- liquid temperature
- maximum pressure.

**Fig. 28** Shaft seal (cartridge type)

TM02 0538 4800

We offer a wide range of shaft seal variants to meet specific demands. See section 9. *Pumped liquids*, page 77.

### Operating pressure and inlet pressure

Do not exceed the limit values for these pressures:

- maximum operating pressure (see page 21)
- maximum inlet pressure (see page 22).

**Fig. 29** CR pump

TM01 2100 1198

### Minimum inlet pressure, NPSH

Calculation of the inlet pressure "H" is recommended in these situations:

- The liquid temperature is high.
- The flow is significantly higher than the rated flow.
- Water is drawn from depths.
- Water is drawn through long pipes.
- Inlet conditions are poor.

To avoid cavitation, make sure that there is a minimum pressure on the suction side of the pump.

The maximum suction lift "H" in metres head can be calculated as follows:

$$H = p_b \times 10.2 - \text{NPSH} - H_f - H_v - H_s$$

$p_b$	Barometric pressure in bar. = Barometric pressure can be set to 1 bar. In closed systems, $p_b$ indicates the system pressure in bar.
NPSH	Net Positive Suction Head in metres head. = To be read from the NPSH curve at the highest flow the pump will be delivering.
$H_f$	Friction loss in suction pipe in metres head. At the highest flow the pump will be delivering.
$H_v$	Vapour pressure in metres head. = To be read from the vapour pressure scale. $H_v$ depends on the liquid temperature $t_m$ .
$H_s$	= Safety margin = minimum 0.5 metres head.

If the calculated "H" is positive, the pump can operate at a suction lift of maximum "H" metres head.

If the calculated "H" is negative, an inlet pressure of minimum "H" metres head is required.

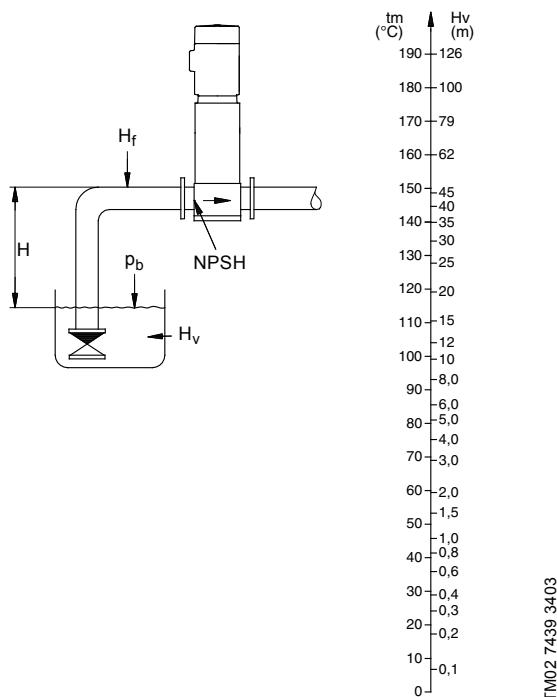

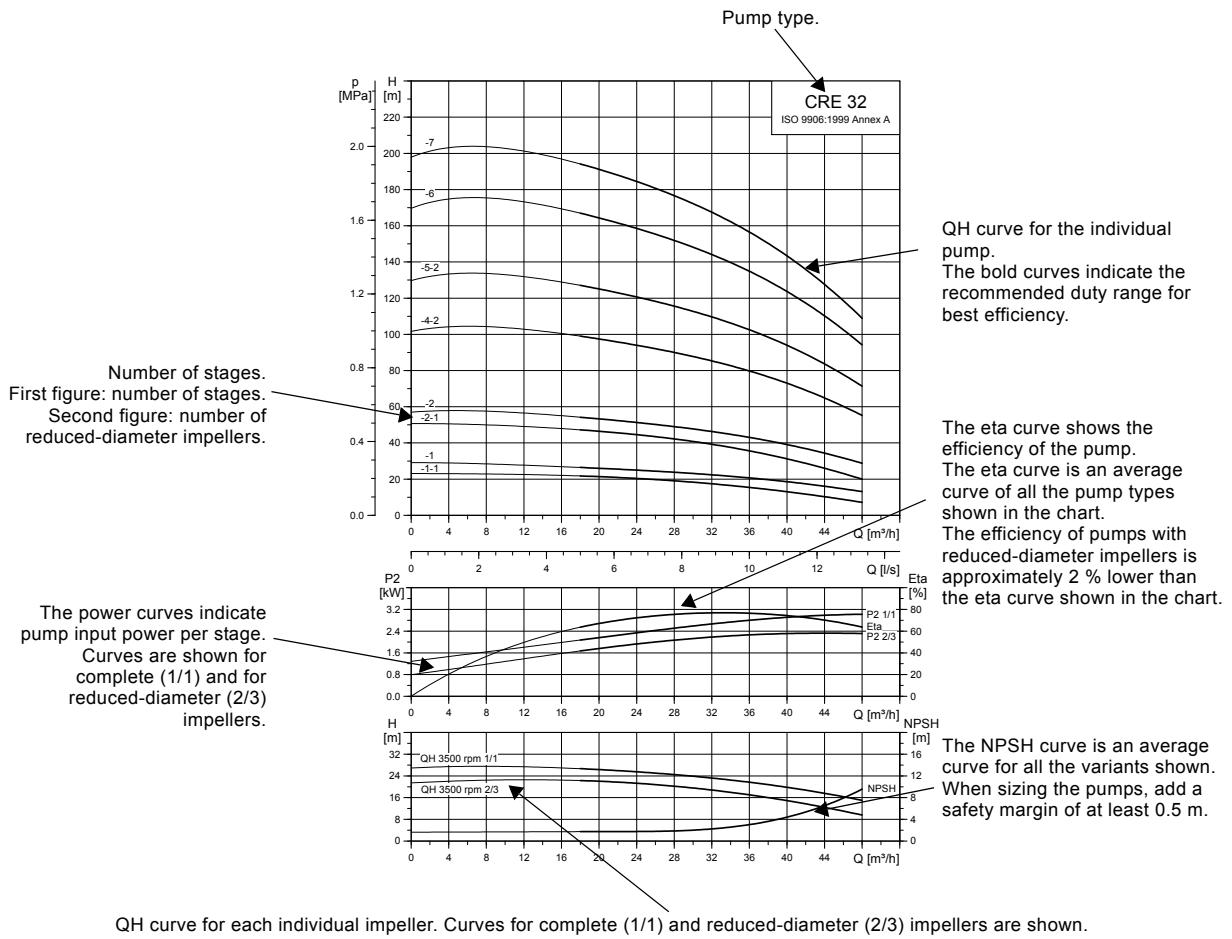

Fig. 30 Minimum inlet pressure, NPSH

**Note:** To avoid cavitation, never select a pump with a duty point too far to the right on the NPSH curve.

Always check the NPSH value of the pump at the highest possible flow.

## How to read the curve charts

TM02 7323 3103

Fig. 31 How to read the curve charts

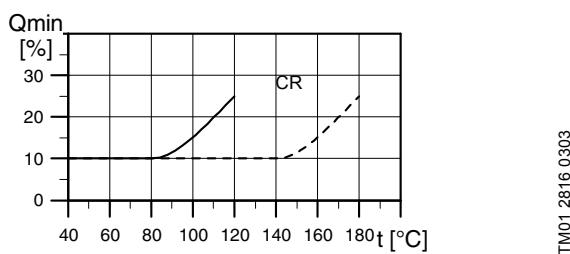

## Guidelines to performance curves

The guidelines below apply to the curves shown on the following pages:

- Tolerances to ISO 9906:1999 Annex A, if indicated.
- The motors used for the measurements are standard Grundfos MG or MGE motors.
- Measurements have been made with airless water at a temperature of 20 °C.
- The curves apply to the following kinematic viscosity:  $\nu = 1 \text{ mm}^2/\text{s}$  (1 cSt).

Due to the risk of overheating, the pumps should not be used at a flow below the minimum flow rate.

The curve below shows the minimum flow rate as a percentage of the rated flow rate in relation to the liquid temperature. The dotted line shows a CR pump fitted with an air-cooled top assembly.

\* Pumps are normally fitted with single-phase MGE motors. Previous dimension tables show pumps with single-phase MGE motors.

\*\* Pumps are normally fitted with three-phase MGE motors. Previous dimension tables show pumps with three-phase MGE motors.

TM03 1712 2805

## 9. Pumped liquids

The pumps are suitable for thin, non-explosive liquids, not containing solid particles or fibres. The liquid must not chemically attack the pump materials.

When pumping liquids with a density and/or viscosity higher than that of water, use oversized motors, if required.

Whether a pump is suitable for a particular liquid depends on a number of factors of which the most important are the chloride content, pH value, temperature and content of chemicals and oils.

Please note that aggressive liquids, such as sea water and some acids, may attack or dissolve the protective oxide film of the stainless steel and thus cause corrosion.

### CRE and CRIE

CRE and CRIE pumps are suitable for non-corrosive liquids.

Use CRE or CRIE pumps for liquid transfer, circulation and pressure boosting of cold or hot clean water.

### CRNE

CRNE pumps are suitable for industrial liquids.

Use CRNE pumps in systems where all parts in contact with the liquid must be made of high-grade stainless steel.

### CRTE

For saline or chloride-containing liquids such as sea water or for oxidising agents such as hypochlorites, we offer CRTE pumps made of titanium.

See the separate data booklet on CRTE available on [www.grundfos.com](http://www.grundfos.com) (WebCAPS).

### List of pumped liquids

A number of typical liquids are listed on the next page.

Other pump versions may be applicable, but those stated in the list are considered to be the best choices.

The table is intended as a general guide only and cannot replace actual testing of the pumped liquids and pump materials under specific operating conditions.

However, use the list with some caution. Factors such as those mentioned below may affect the chemical resistance of a specific pump version:

- concentration of the pumped liquid
- liquid temperature
- pressure.

Take safety precautions when pumping dangerous liquids.

### Notes

---

**D** Often with additives.

The density and/or viscosity differ from that/those of water.

**E** Take this factor into account when calculating motor output and pump performance.

---

**F** Pump selection depends on many factors. Contact Grundfos.

---

**H** Risk of crystallisation/precipitation in shaft seal.

---

**1** Highly flammable liquid.

---

**2** Combustible liquid.

---

**3** Insoluble in water.

---

**4** Low self-ignition point.

Pumped liquid	Chemical formula	Note	Liquid concentration, liquid temperature	CRE, CRIE	CRNE
Acetic acid	CH <sub>3</sub> COOH	-	5 %, 20 °C	-	HQQE

Unsalted swimming-pool water		-	Approx. 2 ppm free chlorine (Cl <sub>2</sub> )	HQQE	-

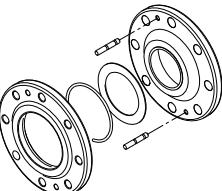

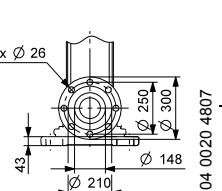

## 10. Accessories

### Pipe connection

Various sets of counter-flanges and couplings are available for pipe connection.

### Adapter kit

DN 150 flanges are available for CRE, CRNE 120 and 150 pumps. To use DN 150 flanges, you must order two adapter kits per pump.

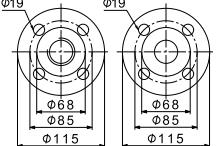

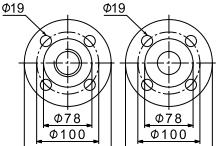

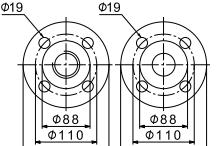

Adapter kit	Pump type	Pipe connection	Adapter kits required	Product number
 TM04 0021 4807	CRE 120 CRE 150	150 mm, nominal	2	96638169
 TM04 0020 4807	CRNE 120 CRNE 150	150 mm, nominal	2	96638180

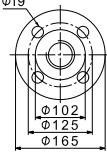

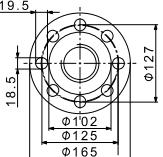

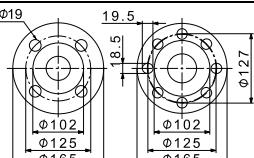

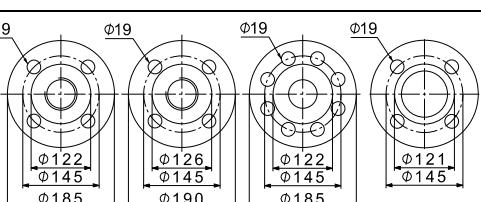

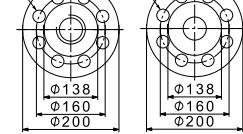

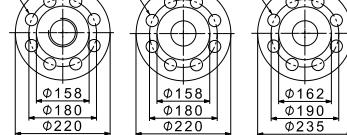

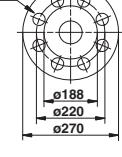

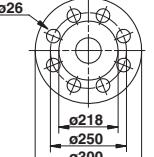

We offer an optional 6" pump base for the CRN 90, 120 and 150 pump ranges with DN 150 connections according to DIN, ANSI and JIS standards. This base eliminates the need for an adapter kit.

For more information, see CR "Custom-built pumps" data booklet on [www.grundfos.com](http://www.grundfos.com) (WebCAPS).

### Counter-flanges for CRE

A set consists of one counter-flange, one gasket, bolts and nuts.

Counter-flange	Pump type	Description	Rated pressure	Pipe connection	Product number

\* Flange with 20 mm higher collar. With this collar, the installation dimensions of a CRE 20 will be identical to those of a CRE 32.  
If a CRE 32 is replaced by a CRE 20, the base must be raised by 15 mm.

## Counter-flanges for CRNE

Counter-flanges for CRNE pumps are made of stainless steel EN 1.4401 (AISI 316).

A set consists of one counter-flange, one gasket, bolts and nuts.

Counter-flange	Pump type	Description	Rated pressure	Pipe connection	Product number
 <b>TM05 0998 2011</b>	<b>CRIE 1, 3, 5 CRNE 1, 3, 5</b>	Threaded	16 bar, EN 1092-2	Rp 1	405284
		For welding	25 bar, EN 1092-2	25 mm, nominal	405285

	CRNE 120 CRNE 150		For welding 40 bar, EN 1092-2	150 mm, nominal	96750478

\* Flange with 20 mm higher collar. With this collar, the installation dimensions of a CRE 20 will be identical to those of a CRE 32.  
If a CRE 32 is replaced by a CRE 20, the base must be raised by 15 mm.

## PJE couplings for CRNE

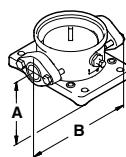

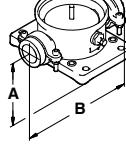

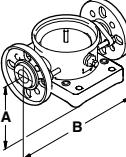

Materials in contact with the pumped liquid are made of stainless steel EN 1.4401 (AISI 316) and rubber.

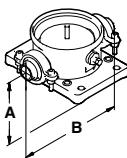

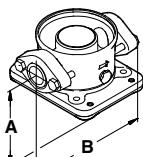

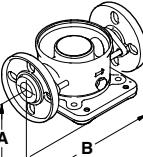

A coupling set consists of two coupling halves (Victaulic type 77), one gasket, one pipe stub (for welding or threaded), bolts and nuts.

Coupling	Pump type	Pipe stub	Max. pressure [bar]	A	B	Pipe connection	Rubber parts	Coupling sets required	Product number
	CRN 1s, 1, 3, 5	Threaded	69	50	320	R 1 1/4	EPDM	2	419911
		For welding	69	50	280	DN 32	FKM	2	419905

## Potentiometer

The potentiometer is suitable for setpoint setting and start/stop of the CRE, CRIE, CRNE pump.

Product	Product number
External potentiometer with cabinet for wall mounting	625468

## EMC filter

The EMC filter is required when 11 to 22 kW E-pumps are installed in residential areas.

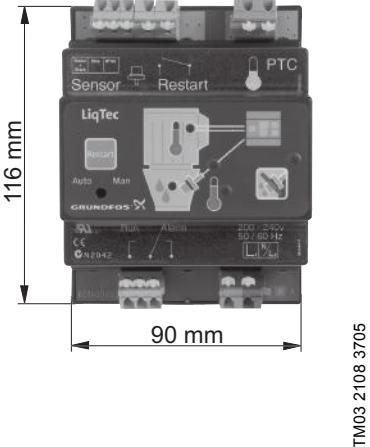

Product	Product number
EMC filter (11 kW)	
EMC filter (15 kW)	
EMC filter (18.5 kW)	96478309
EMC filter (22 kW)	

## LiqTec

The LiqTec dry-running protection unit protects the pump and process against dry running and temperatures exceeding  $130 \pm 5$  °C. Connected to the motor PTC sensor, the LiqTec also monitors the motor temperature.

The LiqTec is prepared for DIN rail mounting in control cabinet.

Enclosure class: IPX0.

## Control MPC

TM05 3232 1012

The Grundfos Control MPC is a complete control cabinet with a built-in CU 352 multipump control unit, main switch, contactors, IO 351 modules, cabling, etc. The Control MPC is designed for the control and monitoring of up to six identical pumps connected in parallel. The Control MPC is supplied with all necessary components and contains application-optimised software.

For further information, please see the Control MPC Data Booklet on WebCaps > [www.grundfos.com/webcaps](http://www.grundfos.com/webcaps)

## Remote controls

### R100 remote control

The R100 is used for wireless communication with the CRE, CRIE or CRNE pump. The R100 communicates with the pump via infrared light.

Product	Product number
R100	96615297

## Grundfos GO Remote

The Grundfos GO Remote is used for wireless infrared or radio communication with the pumps.

Various Grundfos GO Remote variants are available. The variants are described in the following.

### MI 202 and MI 204

The MI 202 and MI 204 are add-on modules with built-in infrared and radio communication. The MI 202 can be used in conjunction with an Apple iPhone or iPod with 30-pin connector and iOS 5.0 or later, e.g. fourth generation iPhone or iPod.

The MI 204 can be used in conjunction with an Apple iPhone or iPod with Lightning connector, e.g. fifth generation iPhone or iPod.

(The MI 204 is also available together with an Apple iPod touch and a cover.)

**Fig. 33** MI 202 and MI 204

Supplied with the product:

- Grundfos MI 202 or 204
- sleeve
- quick guide
- charger cable.

TM05 3887 1612 - TM05 7704 1513

**MI 301**

The MI 301 is a module with built-in infrared and radio communication. The MI 301 can be used in conjunction with Android or iOS-based smart devices with a Bluetooth connection. The MI 301 has rechargeable Li-ion battery and must be charged separately.

TM05 3890 1712

**Fig. 34** MI 301

Supplied with the product:

- Grundfos MI 301
- sleeve
- battery charger
- quick guide.

**Product numbers**

Grundfos GO Remote variant	Product number
Grundfos MI 202	98046376
Grundfos MI 204	98424092
Grundfos MI 204 including iPod touch	98612711
Grundfos MI 301	98046408

## CIU communication interface units

GIA 6118

**Fig. 35** Grundfos CIU communication interface unit

The CIU units enable communication of operating data, such as measured values and setpoints, between CRE, CRIE, CRNE pumps and a building management system. The CIU unit incorporates a 24-240 VAC/VDC power supply module and a CIM module. It can either be mounted on a DIN rail or on a wall.

We offer the following CIU units:

### **CIU 100**

For communication via LonWorks.

### **CIU 150**

For communication via PROFIBUS DP.

### **CIU 200**

For communication via Modbus RTU.

### **CIU 250**

For wireless communication via GSM/GPRS.

### **CIU 271**

For communication via Grundfos Remote Management (GRM).

### **CIU 300**

For communication via BACnet MS/TP.

Description	Fieldbus protocol	Product number
CIU 100	LonWorks	96753735
CIU 150	PROFIBUS DP	96753081
CIU 200	Modbus RTU	96753082
CIU 250*	GSM/GPRS	96787106
CIU 271*	GRM	96898819
CIU 300	BACnet MS/TP	Contact Grundfos

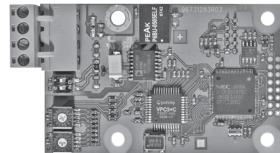

\* Antenna not included. See below.

### **Antennas for CIU 250 and 270**

Description	Product number
Antenna for roof	97631956
Antenna for desk	97631957

For further information about data communication via CIU units and fieldbus protocols, see the CIU documentation available on [www.grundfos.com](http://www.grundfos.com) (WebCAPS).

## CIM communication interface modules

GIA 6121

**Fig. 36** Grundfos CIM communication interface module

The CIM modules enable communication of operating data, such as measured values and setpoints, between CRE, CRIE or CRNE pumps of 11-22 kW and a building management system. The CIM modules are add-on communication modules which are fitted in the terminal box of CRE, CRIE, CRNE pumps of 11-22 kW.

**Note:** CIM modules must be fitted by authorised personnel.

We offer the following CIM modules:

### **CIM 100**

For communication via LonWorks.

### **CIM 150**

For communication via PROFIBUS DP.

### **CIM 200**

For communication via Modbus RTU.

### **CIM 250**

For wireless communication via GSM/GPRS.

### **CIM 271**

For communication via Grundfos Remote Management (GRM).

### **CIM 300**

For communication via BACnet MS/TP.

Description	Fieldbus protocol	Product number

CIM 150	PROFIBUS DP	96824793
CIM 200	Modbus RTU	96824796
CIM 250*	GSM/GPRS	96824795
CIM 271*	GRM	96898815
CIM 300	BACnet MS/TP	Contact Grundfos

\* Antenna not included. See below.

### **Antennas for CIM 250 and 270**

Description	Product number
Antenna for roof	97631956
Antenna for desk	97631957

For further information about data communication via CIM modules and fieldbus protocols, see the CIM documentation available on [www.grundfos.com](http://www.grundfos.com) (WebCAPS).

## 11. Variants

The variants are available on request.

Although the Grundfos CRE, CRIE, CRNE product range offers a number of pumps for different applications, customers require specific pump solutions to satisfy their needs. See the following documents:

- Grundfos CR "Custom-built pumps" data booklet
- Grundfos "CRN high pressure" data booklet.

Below please find the range of options available for customising the CRE pumps to meet the customers' demands.

Contact Grundfos for further information or for requests other than the ones mentioned below.

### Motors

Variant	Description
<b>ATEX-approved motor</b>	For operation in hazardous atmospheres, explosion-proof or dust-ignition-proof motors may be required.
<b>Motor with anti-condensation heating unit</b>	For operation in humid environments, motors with built-in anti-condensation heating unit may be required.
<b>Motor with thermal protection</b>	We offer motors with built-in bimetallic thermal switches or temperature-controlled PTC sensors (thermistors) incorporated in the motor windings.
<b>Oversize motor</b>	Ambient temperatures above 40 °C or installation at altitudes of more than 1000 metres above sea level require the use of an oversize motor, i.e. derating.
<b>4-pole motor</b>	We offer 4-pole standard motors.

### Shaft seals

Variant	Description
<b>Shaft seal with FFKM O-ring</b>	We recommend shaft seals with FFKM or FXM O-ring for applications where the pumped liquid may damage the standard O-ring material.
<b>Seal with flush, quench seal</b>	We recommend seals with flush/quench seals for applications involving crystallising, hardening or sticky liquids.
<b>Air-cooled shaft seal system</b>	We recommend air-cooled shaft seal systems for applications involving extremely high temperatures. No conventional mechanical shaft seal can withstand liquid temperatures of up to 180 °C for any length of time.  In order to ensure a low liquid temperature around the standard shaft seal, the pump is fitted with a special air-cooled shaft seal chamber. No separate cooling is required.
<b>Double seal with pressure chamber</b>	We recommend double seals with pressure chamber for applications involving poisonous or explosive liquids. It protects the surrounding environment and the people working in the vicinity of the pump. It consists of two seals mounted in a "back-to-back" arrangement inside a separate pressure seal chamber. As the pressure in the chamber is higher than the pump pressure, leakage is prevented. A dosing pump or a special pressure intensifier generates the seal chamber pressure.
<b>CR MAGdrive</b>	Magnetically driven pumps for industrial applications. Key applications are industrial processes involving the handling of aggressive, environmental, dangerous or volatile liquids, for example organic compounds and solvents.

### Pumps

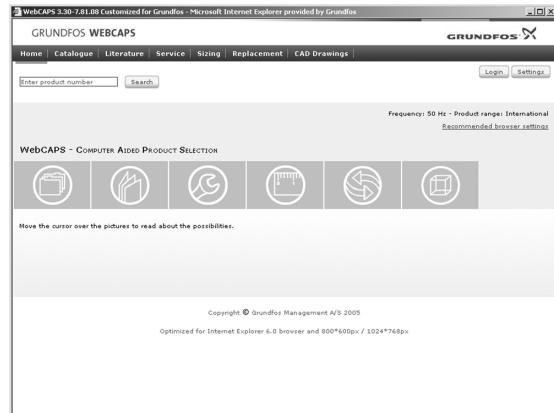

Variant	Description
<b>Horizontally mounted pump</b>	For safety or height reasons, certain applications, for instance on ships, require the pump to be mounted in the horizontal position. For easy installation, the pump is fitted with brackets that support motor and pump.
<b>Low-temperature pump</b>	Exposed to temperatures down to -40 °C, coolant pumps may require neck rings with a different diameter in order to prevent impeller drag.
<b>High-speed pump up to 47 bar</b>	For high-pressure applications, we offer a unique pump capable of generating a pressure of up to 47 bar. The pump is fitted with a high-speed motor, type MGE. The direction of rotation is the opposite of that of standard pumps, and the chamber stack is turned upside-down, as a result of which the pumped liquid flows in the opposite direction.
<b>High-pressure pump up to 47 bar</b>	For high-pressure applications, we offer a unique double pump system capable of generating a pressure of up to 47 bar.
<b>Low-NPSH pump (improved suction)</b>	We recommend the Low-NPSH pump for boiler-feed applications where cavitation may occur due to poor inlet conditions.
<b>Pump with bearing flange</b>	The bearing flange is suitable for applications where the inlet pressure is higher than the maximum pressure recommended. The bearing flange increases the life of motor bearings. We recommend this pump for standard motors.
<b>Belt-driven pump</b>	Belt-driven pumps designed to operate in places with limited space or where no electrical power is available.
<b>Pump for pharmaceutical and biotechnological applications</b>	CRNE pumps designed for applications requiring the sterilisation and CIP capability of pipes, valves and pumps. (CIP = Cleaning-In-Place.)

### Connections and other variants

Variant	Description
<b>Pipe connections</b>	In addition to the wide range of standard flange connections, a 16 bar DIN standard clamping flange is available. Customised flanges are available according to specifications.
<b>TriClamp connection</b>	TriClamp connections are of a hygienic design with a sanitary coupling for use in the pharmaceutical and food industry.
<b>Electropolished pump</b>	To substantially reduce the risk of corrosion of the materials. For use in the pharmaceutical and food industry.

## 12. Further product information

### WebCAPS

WebCAPS is a **Web-based Computer Aided Product Selection** program available on [www.grundfos.com](http://www.grundfos.com).

WebCAPS contains detailed information on more than 220,000 Grundfos products in more than 30 languages.

Information in WebCAPS is divided into six sections:

- Catalogue
- Literature
- Service
- Sizing
- Replacement
- CAD drawings.

#### Catalogue

Based on fields of application and pump types, this section contains the following:

- technical data
- curves (QH, Eta, P1, P2, etc.) which can be adapted to the density and viscosity of the pumped liquid and show the number of pumps in operation
- product photos
- dimensional drawings
- wiring diagrams
- quotation texts, etc.

#### Literature

This section contains all the latest documents of a given pump, such as

- data booklets
- installation and operating instructions
- service documentation, such as Service kit catalogue and Service kit instructions
- quick guides
- product brochures.

#### Service

This section contains an easy-to-use interactive service catalogue. Here you can find and identify service parts of both existing and discontinued Grundfos pumps. Furthermore, the section contains service videos showing you how to replace service parts.

## WinCAPS

Fig. 37 WinCAPS DVD

### Sizing

This section is based on different fields of application and installation examples and gives easy step-by-step instructions in how to size a product:

- Select the most suitable and efficient pump for your installation.
- Carry out advanced calculations based on energy, consumption, payback periods, load profiles, life cycle costs, etc.
- Analyse your selected pump via the built-in life cycle cost tool.
- Determine the flow velocity in wastewater applications, etc.

### Replacement

In this section you find a guide to selecting and comparing replacement data of an installed pump in order to replace the pump with a more efficient Grundfos pump.

The section contains replacement data of a wide range of pumps produced by other manufacturers than Grundfos.

Based on an easy step-by-step guide, you can compare Grundfos pumps with the one you have installed on your site. When you have specified the installed pump, the guide will suggest a number of Grundfos pumps which can improve both comfort and efficiency.

### CAD drawings

In this section, it is possible to download 2-dimensional (2D) and 3-dimensional (3D) CAD drawings of most Grundfos pumps.

These formats are available in WebCAPS:

2-dimensional drawings:

- .dxf, wireframe drawings
- .dwg, wireframe drawings.

3-dimensional drawings:

- .dwg, wireframe drawings (without surfaces)
- .stl, solid drawings (with surfaces)
- .eppt, E-drawings.

WinCAPS is a **Windows-based Computer Aided Product Selection** program containing detailed information on more than 220,000 Grundfos products in more than 30 languages.

The program contains the same features and functions as WebCAPS, but is an ideal solution if no internet connection is available.

WinCAPS is available on DVD and updated once a year.
