

AIR FILTERS FOR VACUUM PUMPS

FILTER TECHNICS when produces its own filters follows always the most common principles and building philosophy of the major vacuum pumps manufacturers: it happens also for air filters dedicated to these products and it's the reason let our cartridges be fully interchangeable with the original ones.

The nominal filtration is 5-7 microns and it's guaranteed from BIA Certifications. We can grant to our customer a flow range of production from 1 m³/h up to 5.000 m³/h including customization (upon request) for any kind of filter.

Each FILTER TECHNICS 's product is checked throughout its progressive phases of manufacturing in order to secure an almost total lack of mistakes.

Some cartridges can be produced by fitting a special material between two meshes; in this way we are able to ead the filtration level to about 2 microns. If requested, all the filter elements are supplied complete of respective gaskets.
