

KETO K-TC VORTEX PUMPS

SOLUTIONS FOR FRAGILE SLURRIES

The KETO range of K-TC vortex pumps is your solution to pumping slurries with the minimum impact on the particles. The vortex created by the impeller transfers energy to the slurry without direct impact from the vanes on the particles. This allows particles to be pumped without damage.

ORIENTATION OPTIONS

The K-TC range comes in horizontal and vertical arrangements. The K-TC range is mounted on KETO's K-HS & K-VS drive assemblies providing commonality of spares and long term reliability.

SPARE PARTS

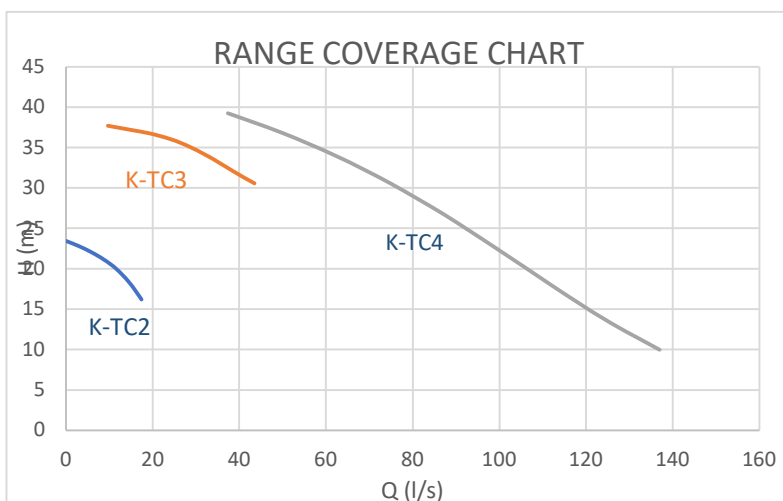

KETO holds a comprehensive stock of spares for the K-TC range. KETO can also supply conversion kits or spares for other brands of vortex pumps.

K-TC3 Horizontal Vortex Pump set

K-VTC3 Vertical Vortex Sump Pump Set

TECHNICAL DATA

- Flow rates - 1 m³/hr to 35 m³/hr
- Head – up to 40 m
- Materials – 27% chrome iron standard – other metals available as special order
